Use Generative AI for Software Development, IBM SkillsBuild

PROJECTS

AI Smart Mirror, Personal Project

May '25 — Jun '25

Warangal, India

- Technologies: Python, OpenCV, Face Recognition, Google Calendar API, DroidCam
 - =>Developed and AI- powered Smart Mirror using Python and OpenCV with real-time face recognition and anti-spoofing (eye-blink detection) for secure user authentication.
 - =>Integrated Google Calendar API to dynamically display personalized event reminders based on the recognized user's email.
 - =>Implemented voice greetings, current time & date display, and responsive GUI using a laptop and DroidCam as a virtual webcam.
 - =>System dynamically adapts content per user, enabling multi-user experience with intelligent scheduling and identitybased interaction.

May '25 — Jun '25

Digital College Library, Personal Project

Warangal, India

- Technologies: HTML, CSS, JavaScript, Node.js, JSON package
 - Built a Netflix-inspired digital library website where students can browse book covers and grab books by entering their Hall Ticket Number.
 - Implemented semester-based filtering , and real-time book copy availability tracking using JSON package
 - Developed dual roles: Student View for book browsing & borrowing and Librarian View with secure login to manage dashboard.
 - Automated fine calculation if book is not returned within 5 days and enabled return functionality with automatic copy increment & row removal.
 - Built real-time dashboard for librarians to monitor borrowed books and track overdue returns efficiently.
